

# My Portfolio

## HTML / CSS

Welcome to my first front-development project. This project is made to practice the **HTML / CSS** module on start2impact university

I created my first portfolio website. The project is available online on my Github profile : <https://github.com/sandracarmena>

# Introduction

For this project, I particularly put into practice the lessons learned in the HTML / CSS module

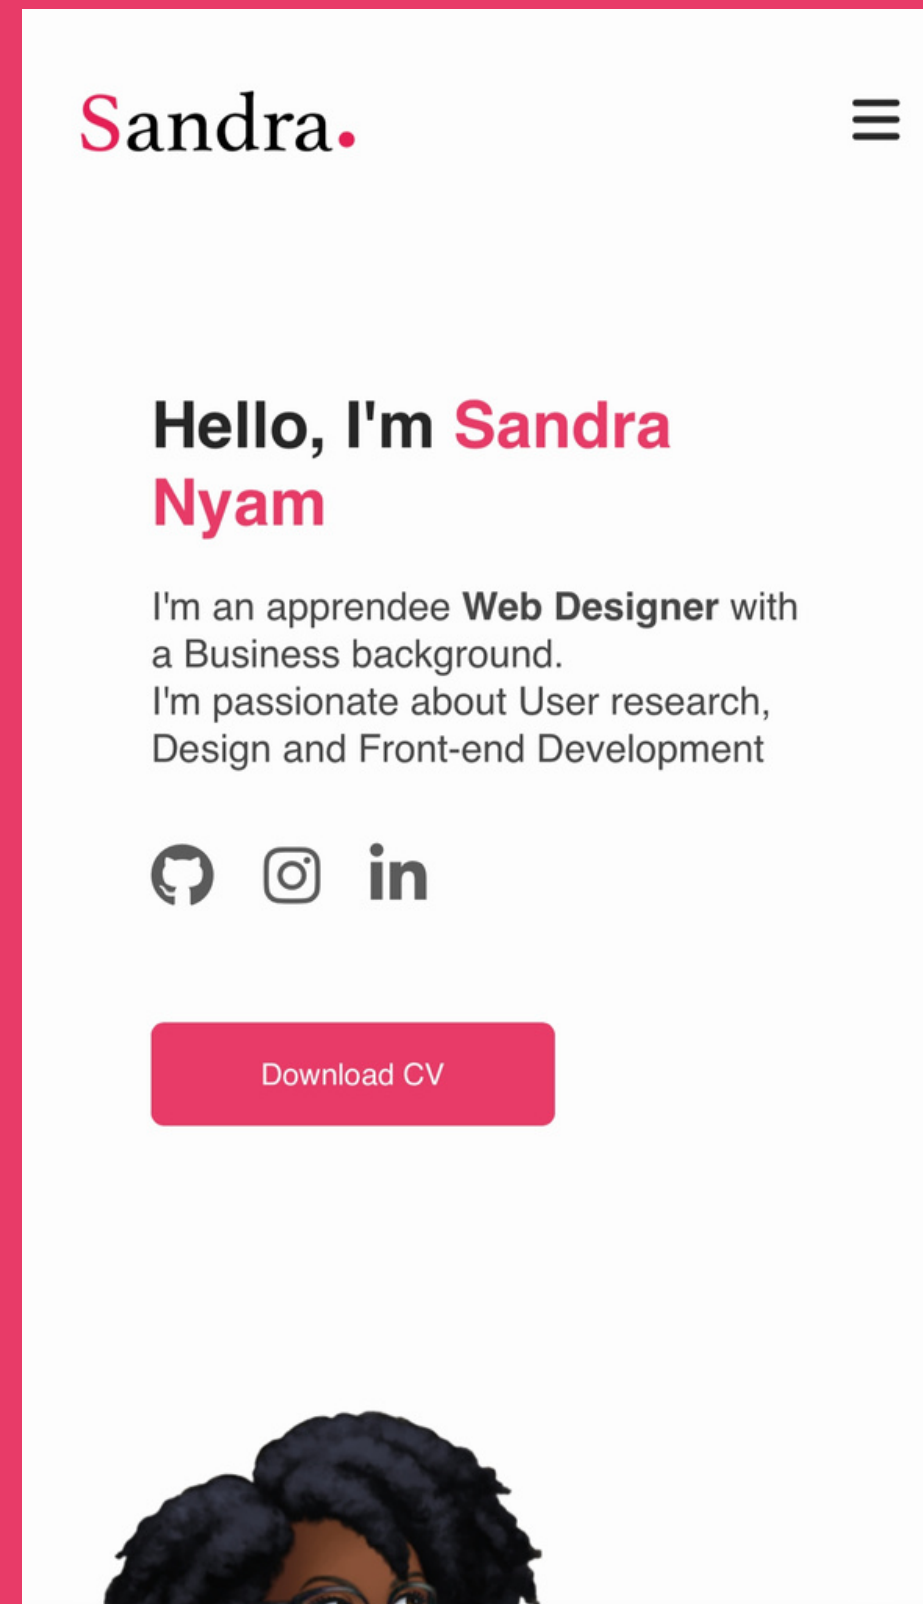

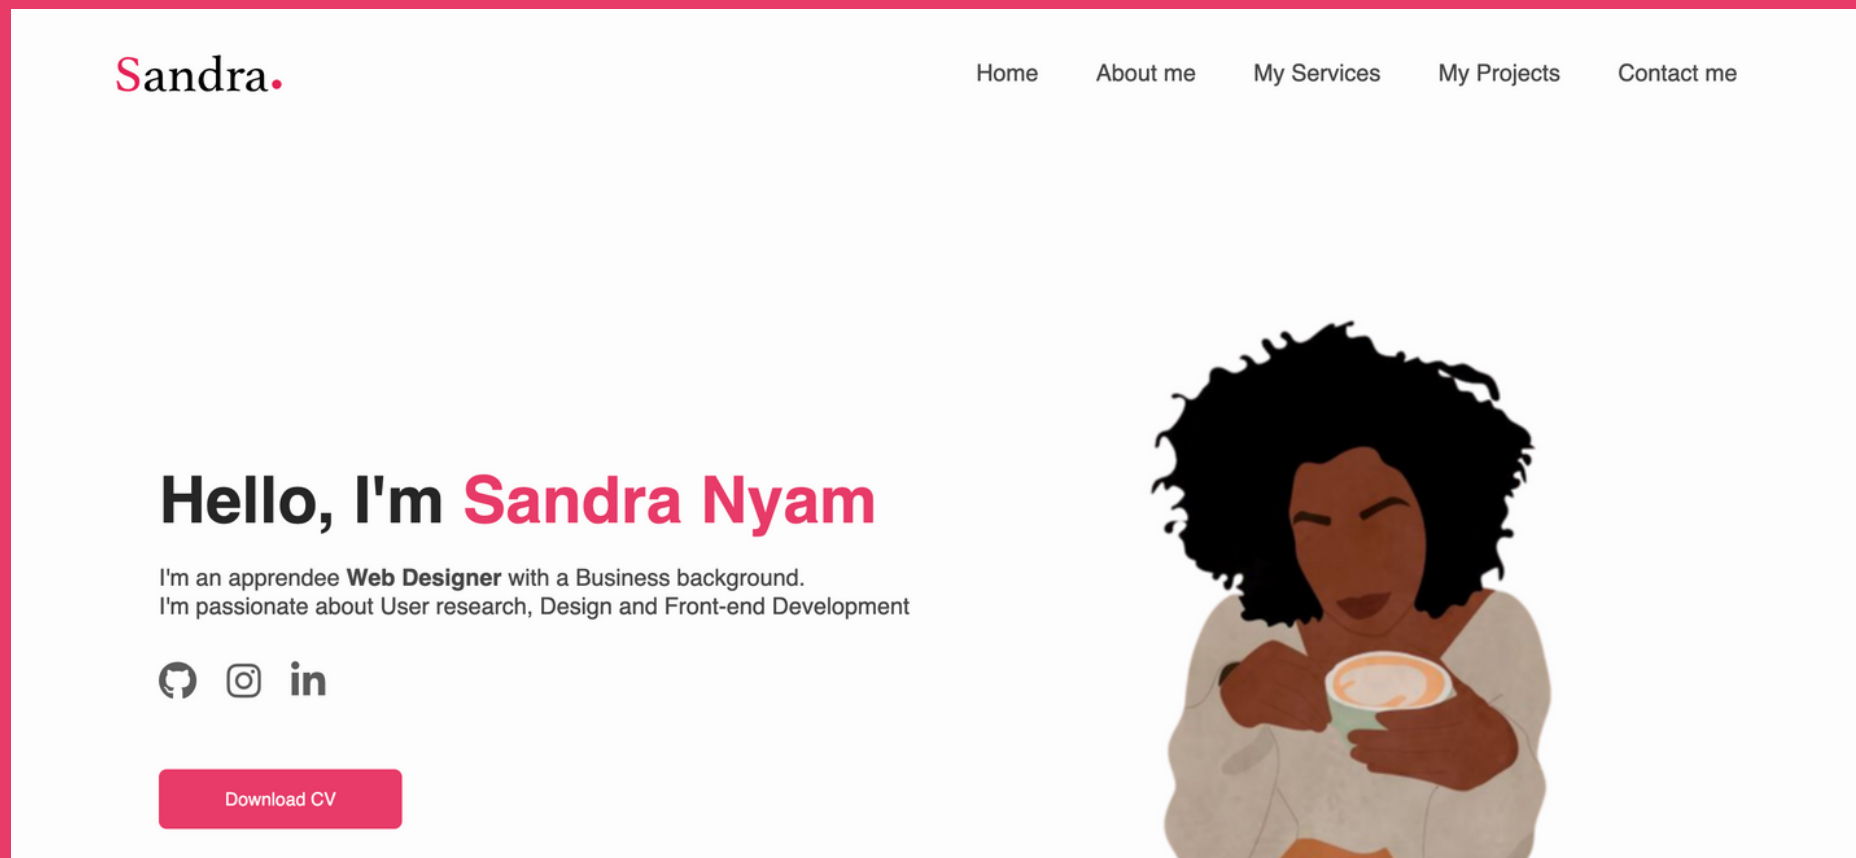

I also used some personal Javascript knowledge to add effects to the "about section", including the Skills, Experiences and Education drop-down.

The goal of the project was to really highlight some projects on which I had to work and my desire to improve my learning.

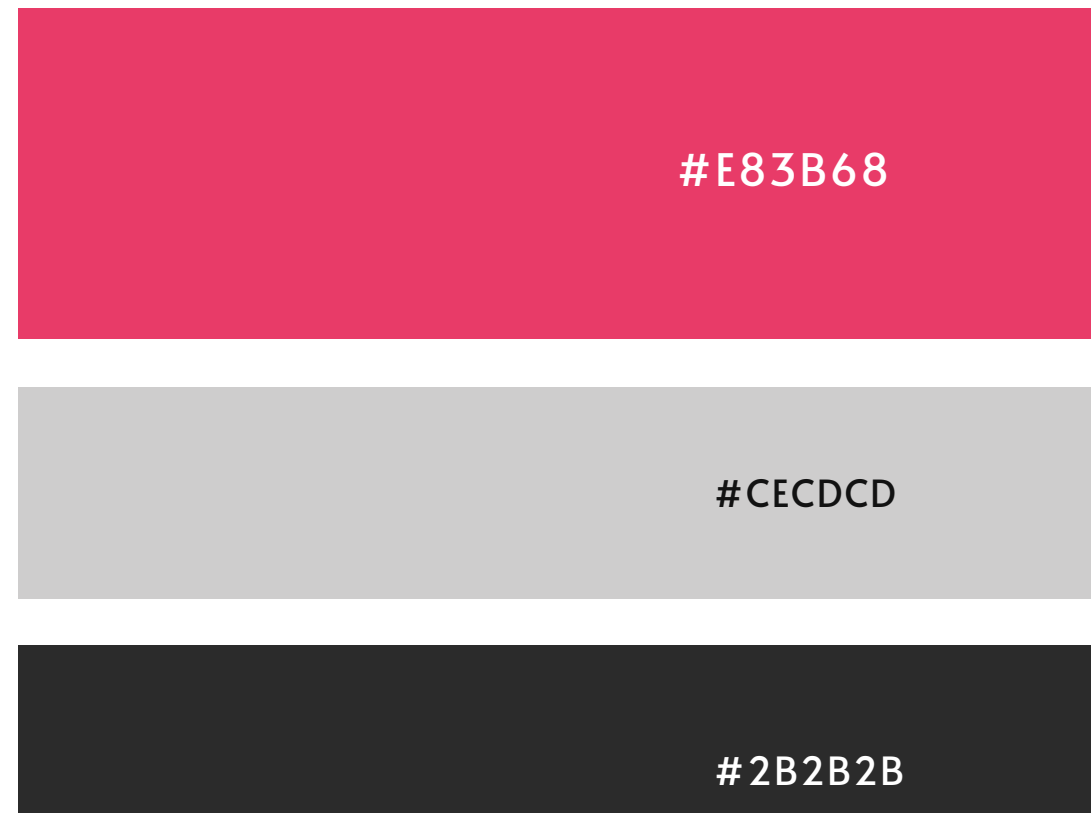

For this project I also learned to use Github and I was able to create a new repository to have an online version of the site.

# Web and Mobile

# Graphic Design

The visual identity is very simple and modern. Composed of two main colors with a shade of grey-black for certain texts. The main color is used to mark important text elements
